

Testing PGF and TikZ support in DocOnce

Kristian Gregorius Hustad (krihus@ifi.uio.no)

Jul 28, 2016

1 A modest beginning

Figure 1: This shape is commonly referred to a *straight line*.

Lines such as the one in figure 1 can be combined to form other shapes.

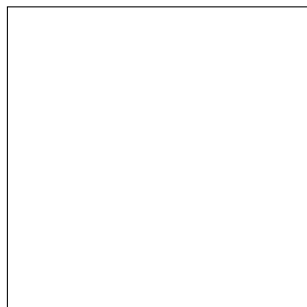

Figure 2: This square is formed by four straight lines.

A grid can also be made from straight lines.

A `fig/circle.tikz`, however, cannot be formed by a finite number of straight lines.

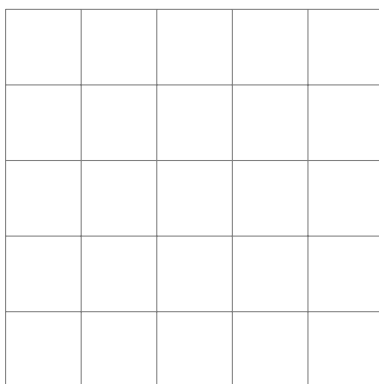

Figure 3: This is a grid with 5 x 5 cells

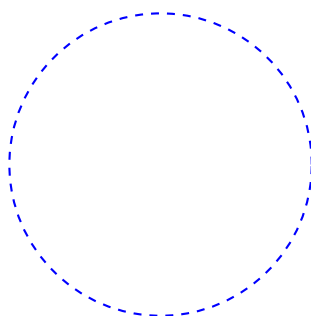

Figure 4: This circle is drawn in blue with a dashed line.

2 More advanced figures

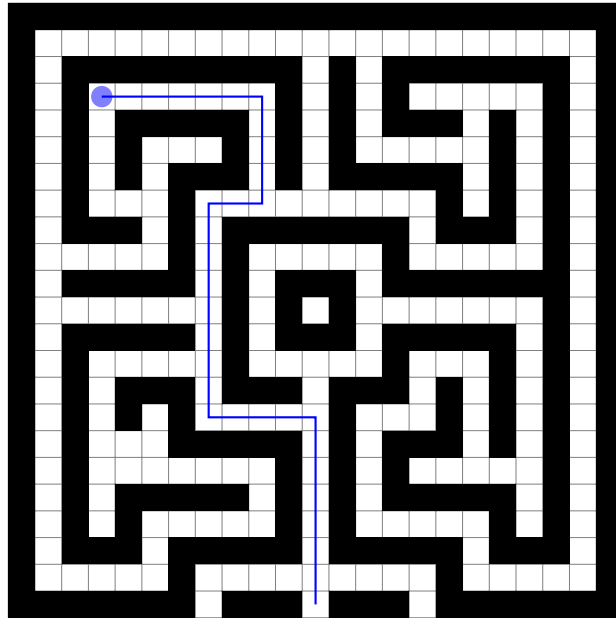

Figure 5: A maze can be drawn by combining the elements above.

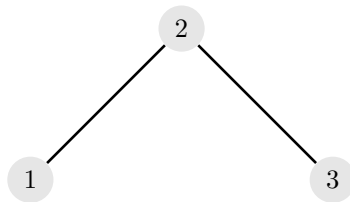

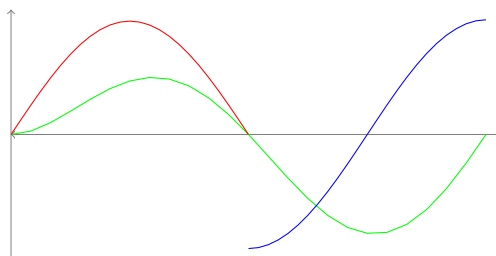

Figure 6: TikZ is quite well suited to draw graphs.

3 Plotting functions

TikZ can be used to plot functions. The next figure will be inlined.

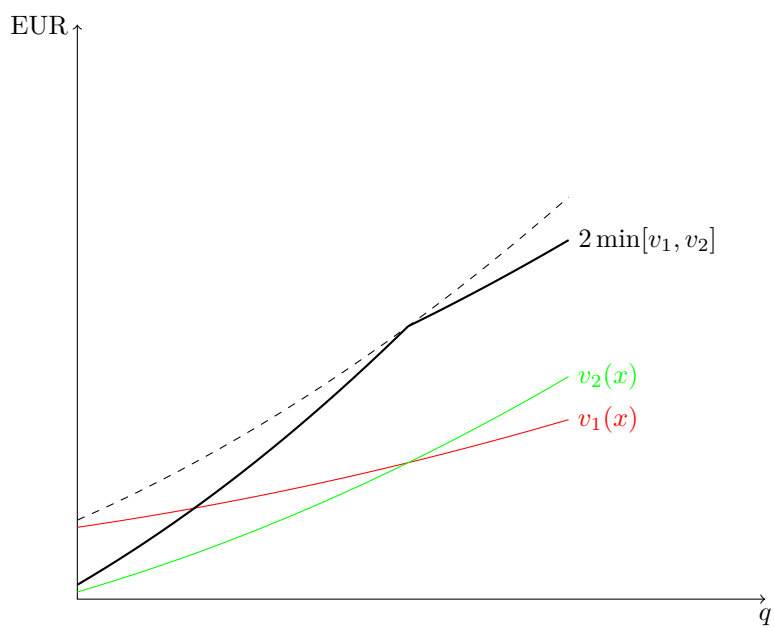

Figure 7: The functions can even be labeled!
