Goal

The primary goal of this demo talk is to demonstrate how to write talks with DocOnce and get them rendered in numerous HTML formats.

LAYOUT.

This version utilizes beamer slides with the theme vintage.

Mathematical problem

$$u'(t) = -au(t), \tag{1}$$

$$u(0) = I, (2)$$

- $t \in (0,T]$
- a, I, and T are prescribed parameters
- u(t) is the unknown function

Numerical solution method

- Mosb in time: $0 = t_0 < t_1 \cdots < t_N = T$
- Assume constant $\Delta t = t_n t_{n-1}$
- u": numerical approx to the exact solution

Numerical scheme:

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

Numerical solution method

- Mesh in time: $0 = t_0 < t_1 \cdots < t_N = T$
- Assume constant $\Delta t = t_n t_{n-1}$
- u^n : numerical approx to the exact solution at t_n

Numerical scheme

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

Numerical solution method

- Mesh in time: $0 = t_0 < t_1 \cdots < t_N = T$
- Assume constant $\Delta t = t_n t_{n-1}$
- u^n : numerical approx to the exact solution at t_n

Numerical scheme:

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

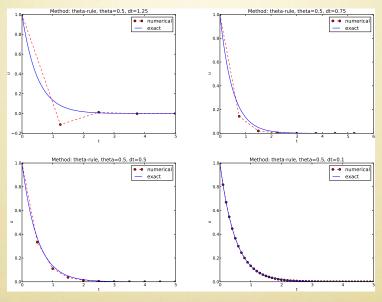

Forward Euler explained

Implementation

The numerical method is implemented in a Python function:

The Crank-Nicolson method

$$A^n$$
, $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$

- Stability: |A| < 1
- No oscillations: A > 0
- Always for Backward Euler ($\theta = 1$)
- $\Delta t < 1/a$ for Forward Euler ($\theta = 0$)
- $\Delta t < 2/a$ for Crank-Nicolson ($\theta = 1/2$)

$$u^n = A^n$$
, $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$.

- Stability: A
- No oscillations: A > 0
- Always for Backward Euler ($\theta = 1$)
- $\Delta t < 1/a$ for Forward Euler ($\theta = 0$
- $\Delta t < 2/a$ for Crank-Nicolson ($\theta = 1/2$)

$$u^n = A^n$$
, $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$.

- Stability: |A| < 1
- No oscillations: A > 0
- Always for Backward Euler ($\theta = 1$)
- $\Delta t < 1/a$ for Forward Euler $(\theta = 0)$
- $\Delta t < 2/a$ for Crank-Nicolson ($\theta = 1/2$)

$$u^n = A^n$$
, $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$.

- Stability: |A| < 1
- No oscillations: A > 0
- Always for Backward Euler ($\theta = 1$)
- $\Delta t < 1/a$ for Forward Euler $(\theta = 0)$
- $\Delta t < 2/a$ for Crank-Nicolson ($\theta = 1/2$)
