Sep 24, 2015

#### Goal

The primary goal of this demo talk is to demonstrate how to write talks with DocOnce and get them rendered in numerous HTML formats.

#### Layout

This version utilizes beamer slides with the theme cbc.

Problem setting and methods

Results

# **Problem setting and methods**

# We aim to solve the (almost) simplest possible differential equation problem

$$u'(t) = -au(t) \tag{1}$$

$$u(0) = I \tag{2}$$

#### Here,

- ▶  $t \in (0, T]$
- a, I, and T are prescribed parameters
- $\triangleright$  u(t) is the unknown function
- ► The ODE (1) has the initial condition (2)

- ▶ Mesh in time:  $0 = t_0 < t_1 \cdots < t_N = T$
- Assume constant  $\Delta t = t_n t_{n-1}$
- $\triangleright$   $u^n$ : numerical approx to the exact solution at  $t_n$

The  $\theta$  rule

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

contains the Forward Euler ( $\theta = 0$ ), the Backward Euler ( $\theta = 1$ ), and the Crank-Nicolson ( $\theta = 0.5$ ) schemes.

- ▶ Mesh in time:  $0 = t_0 < t_1 \cdots < t_N = T$
- Assume constant  $\Delta t = t_n t_{n-1}$
- $\triangleright$   $u^n$ : numerical approx to the exact solution at  $t_n$

The  $\theta$  rule.

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

contains the Forward Euler ( $\theta=0$ ), the Backward Euler ( $\theta=1$ ) and the Crank-Nicolson ( $\theta=0.5$ ) schemes.

- ▶ Mesh in time:  $0 = t_0 < t_1 \cdots < t_N = T$
- ▶ Assume constant  $\Delta t = t_n t_{n-1}$
- $\triangleright$   $u^n$ : numerical approx to the exact solution at  $t_n$

The  $\theta$  rule.

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

contains the Forward Euler ( $\theta=0$ ), the Backward Euler ( $\theta=1$ ) and the Crank-Nicolson ( $\theta=0.5$ ) schemes.

- ► Mesh in time:  $0 = t_0 < t_1 \cdots < t_N = T$
- ▶ Assume constant  $\Delta t = t_n t_{n-1}$
- $\triangleright$   $u^n$ : numerical approx to the exact solution at  $t_n$

The  $\theta$  rule.

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

contains the Forward Euler ( $\theta=0$ ), the Backward Euler ( $\theta=1$ ), and the Crank-Nicolson ( $\theta=0.5$ ) schemes.

- ▶ Mesh in time:  $0 = t_0 < t_1 \cdots < t_N = T$
- ▶ Assume constant  $\Delta t = t_n t_{n-1}$
- $ightharpoonup u^n$ : numerical approx to the exact solution at  $t_n$

The  $\theta$  rule,

$$u^{n+1} = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}u^n, \quad n = 0, 1, \dots, N - 1$$

contains the Forward Euler ( $\theta=0$ ), the Backward Euler ( $\theta=1$ ), and the Crank-Nicolson ( $\theta=0.5$ ) schemes.

### The Forward Euler scheme explained

http://youtube.com/PtJrPEIHNJw

### **Implementation**

#### Implementation in a Python function:

```
def solver(I, a, T, dt, theta):
    """Solve u'=-a*u, u(0)=I, for t in (0,I]; step: dt."""
    dt = float(dt)  # avoid integer division
    N = int(round(T/dt))  # no of time intervals
    T = N*dt  # adjust T to fit time step dt
    u = zeros(N+1)  # array of u[n] values
    t = linspace(0, T, N+1)  # time mesh

u[0] = I  # assign initial condition
    for n in range(0, N):  # n=0,1,...,N-1
        u[n+1] = (1 - (1-theta)*a*dt)/(1 + theta*dt*a)*u[n]
    return u, t
```

#### How to use the solver function

#### A complete main program

```
# Set problem parameters
T = 1.2
a = 0.2
T = 8
dt = 0.25
theta = 0.5
\pause
from solver import solver, exact_solution
u, t = solver(I, a, T, dt, theta)
\pause
import matplotlib.pyplot as plt
plt.plot(t, u, t, exact_solution)
plt.legend(['numerical', 'exact'])
plt.show()
```

Problem setting and methods

#### Results

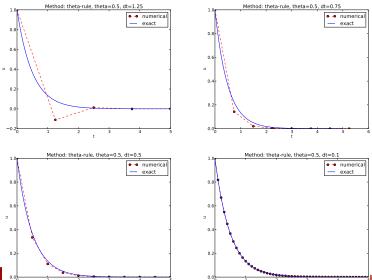

### **Results**

# The Crank-Nicolson method shows oscillatory behavior for not sufficiently small time steps, while the solution should be monotone

Exact solution of the scheme

$$u^n = A^n$$
,  $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$ .

#### Key results:

- Stability: |A| < 1</p>
- No oscillations: A > 0
- ▶  $\Delta t < 1/a$  for Forward Euler ( $\theta = 0$ )
- ▶  $\Delta t < 2/a$  for Crank-Nicolson ( $\theta = 1/2$ )

#### Concluding remarks:

Exact solution of the scheme:

$$u^n = A^n$$
,  $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$ .

#### Key results:

- ► Stability: |A| < 1
- No oscillations: A > 0
- ▶  $\Delta t < 1/a$  for Forward Euler ( $\theta = 0$ )
- $ightharpoonup \Delta t < 2/a$  for Crank-Nicolson ( $\theta = 1/2$ )

#### Concluding remarks:

Exact solution of the scheme:

$$u^n = A^n$$
,  $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$ .

#### Key results:

- ► Stability: |A| < 1
- No oscillations: A > 0
- $ightharpoonup \Delta t < 1/a$  for Forward Euler ( $\theta = 0$ )
- ▶  $\Delta t$  < 2/a for Crank-Nicolson ( $\theta = 1/2$ )

#### Concluding remarks:

Exact solution of the scheme:

$$u^n = A^n$$
,  $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$ .

#### Key results:

- ► Stability: |A| < 1
- ► No oscillations: *A* > 0
- ▶  $\Delta t < 1/a$  for Forward Euler ( $\theta = 0$ )
- ▶  $\Delta t < 2/a$  for Crank-Nicolson ( $\theta = 1/2$ )

#### Concluding remarks:

Exact solution of the scheme:

$$u^n = A^n$$
,  $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$ .

#### Key results:

- ► Stability: |A| < 1
- ► No oscillations: *A* > 0
- ▶  $\Delta t < 1/a$  for Forward Euler ( $\theta = 0$ )
- ▶  $\Delta t < 2/a$  for Crank-Nicolson ( $\theta = 1/2$ )

#### Concluding remarks:

Exact solution of the scheme:

$$u^n = A^n$$
,  $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$ .

#### Key results:

- ► Stability: |A| < 1
- ► No oscillations: *A* > 0
- ▶  $\Delta t < 1/a$  for Forward Euler ( $\theta = 0$ )
- ▶  $\Delta t$  < 2/a for Crank-Nicolson ( $\theta = 1/2$ )

#### Concluding remarks:

Exact solution of the scheme:

$$u^n = A^n$$
,  $A = \frac{1 - (1 - \theta)a\Delta t}{1 + \theta a\Delta t}$ .

#### Key results:

- ► Stability: |A| < 1
- No oscillations: A > 0
- ▶  $\Delta t < 1/a$  for Forward Euler ( $\theta = 0$ )
- ▶  $\Delta t$  < 2/a for Crank-Nicolson ( $\theta = 1/2$ )

#### Concluding remarks:
